

# Applied Research for Pest and Disease Management

Cannabis has unique pest and disease problems with product restrictions that do not apply in other crops. There are no quick fixes. We do research to understand underlying problems and develop effective management solutions.

What we bring:

- Core expertise in
  - Entomology, biocontrol, plant pathology
  - Integrated Pest Management (IPM) strategies for greenhouse crops
  - Systems approach to IPM
- Scientific rigour, proven research quality and reputation
- Vendor neutral
- Established connections to the biocontrol industry

What we provide:

- Customized, confidential and collaborative research
- Sustainable pest and disease management solutions
- Results-focused approach
- Enhanced crop quality and value
- Return on research investment
- Client support focus
