

Our Slip Production Network is Growing

Introduced in 2019, Vineland's Radiance sweet potato is early maturing (118-122 days) and best suited to the Canadian growing season. With its red skin and bright, rich orange flesh it is preferred by consumers in taste tests over leading varieties.

Looking to grow Radiance for the upcoming season? Our cross-Canada network is growing with slip producers listed on the back. Please reach out directly.

For information on how to join the Radiance slip production network, please contact:
