

Cannabis research services now available at Vineland

Vineland continues to add to its research services portfolio with a newly acquired Cannabis Research Licence under Health Canada's Cannabis Act.

The cannabis licence allows for the expansion of services to clients in the horticulture sector, providing licensed producers and technology providers results-based solutions for cannabis production.

Vineland's trait development and genomics services spin-off company Platform Genetics Inc. also plays a role in offering services under licence provisions.

What we offer:

- Research, analysis and trials for:
 - Biochemical studies
 - Plant production
 - Genetic diversity
 - Development of elite cannabis varieties
- Integrated pest management solutions
