

Vineland's Tomato-on-the-Vine (TOV) Shared Research Trial

Vineland Research and Innovation Centre's Tomato-on-the-Vine (TOV) Shared Research Trial offers a unique opportunity for agri-tech companies to validate, refine, and advance their horticultural technologies in a collaborative, real-world environment.

The initiative is designed to accelerate agri-tech innovation by combining Agricultural Research and Innovation Ontario's (ARIO), an agency of the Government of Ontario, and Vineland's advanced research facilities, Technology Readiness Level (TRL)-based evaluation, and the expertise of leaders in greenhouse systems, digital technologies, and biological research. Through this shared model, participants gain access to Vineland's deep scientific and technical capabilities, at a fraction of the cost of running independent trials. Collaboration is at the heart of the program. Participating companies work directly with Vineland's team of

experts and a Grower Advisory Panel to ensure new technologies align with grower needs and deliver practical, market-ready solutions. This hands-on partnership provides not only scientific validation but also valuable industry exposure through Vineland's networks, connecting innovators with growers and decision-makers across Canada.

By fostering a shared space for research and development, Vineland's TOV Shared Research Trial bridges the gap between innovation and application, helping agri-tech solutions reach the market faster, stronger, and smarter.
